Summary

Full-stack and AI systems engineer with 2+ years of production experience in **high-availability SaaS**, **AI/LLM reliability & security** (OWASP LLM01 injection defense, LLM-as-a-judge bias calibration, semantic caching), and **distributed payment infrastructure** (Razorpay/Stripe/Zoho gateways, HMAC-verified idempotent webhooks). Founder of CHINTU AI, operating a live SaaS (Web, Desktop, Android) serving 500+ users and 25k+ monthly LLM inferences with 99.8% uptime; built low-latency Java RESP protocol socket servers and B+Tree storage engines.

Experience

Founder & Full Stack Developer — CHINTU AI *Feb 2026 – Present*
getchintu.com Remote, India
Solo-built and operating a live SaaS platform — 500+ registered users, 40+ paying subscribers

- Built multi-platform clients (React, Electron for Windows/macOS, Android) and backend services serving 25k+ monthly LLM inferences; engineered runtime routing across Groq, Gemini, and OpenRouter with sub-400 ms fallback, achieving 99.8% uptime.
- Developed asynchronous Python/FastAPI services with RabbitMQ background workers for 63-language audio transcription and usage tracking, maintaining sub-2 s task queue latency under peak production loads.
- Implemented Razorpay credit-based billing with webhook-driven entitlement sync, HMAC signature verification, and idempotent transaction processing with 100% reconciliation accuracy.
- Audited response logs to eliminate silent LLM failures (empty streams, unhandled provider timeouts); added structured JSON schema validation and exponential retries, slashing user-facing error rates from 7.2% to <0.4%.

Full Stack Developer — Contract (3-month fixed term) *Nov 2025 – Jan 2026*
Indian Capital and Investment (Coimbatore) Limited — fintech investment platform Remote, India
Team of 20 engineers — sole owner of the Stripe/Zoho Payments integration, end to end

- Replaced scheduled polling with a webhook-driven event pipeline, cutting payment-failure detection lag from 20 min to under 3 min; implemented idempotency-key handling and HMAC signature verification across all endpoints.
- Migrated CI/CD deployments to Firebase App Hosting, cutting release cycle times from 30 min to under 5 min.

Software Developer *Aug 2024 – Oct 2025*
Vasnaani Sanskaran — early-stage software startup Noida, India
Sole engineer — designed and shipped 4 customer-facing web applications from schema to deployment

- Eliminated N+1 query patterns and added composite indexes on 3 high-traffic endpoints; p95 response time dropped from ∼850 ms to ∼550 ms, confirmed in production server-timing logs.
- Introduced memoized selectors (`reselect`) across 12 Redux-connected components, eliminating full-tree re-renders; measured 25% improvement with React DevTools Profiler.

Full Stack Developer Intern *Jan 2024 – Jun 2024*
Hoping Minds Mohali, India

- Rebuilt performance-critical pages as React components consuming Django REST APIs, raising the Lighthouse mobile score from 68 to 94 and cutting page load time by 22%.

Projects

RAG Prompt Injection & Defense Audit — AI Security Framework *Python 3.14, ChromaDB, Pytest (98% Coverage), OWASP LLM01, Regex Guardrails*

- Empirical cybersecurity audit and 3-tier defense-in-depth framework (XML Data Spotlighting, Pre-Retrieval Heuristic Scanner, Output Canary Regex Redactor) neutralizing indirect prompt injection attacks (OWASP LLM01); dropped attack success rate from 10/10 to 0/10 with 0 false blocks across 20 corporate inquiries and 1.8 ms average latency overhead.

LLM-as-a-Judge Bias Audit & Calibration — Alignment Engine *Python, LLM Evals, Cohen's Kappa, Bias Mitigation, Pytest (93% Coverage), JSON Schema*

- Empirical evaluation framework auditing position bias (4/30 verdicts flipped by presentation order), verbosity bias (+150 filler words), and self-preference; engineered bidirectional swap consensus calibration that raised human agreement from 26/30 to 28/30 (93.3%) with statistical Cohen's Kappa measurement.

Semantic Cache for FAQ Bot — Inference Caching & Latency Optimization *Python, FastAPI, Sentence-Transformers, Vector Similarity, Pytest (84% Coverage), Docker*

- High-throughput vector caching middleware cutting LLM API calls by 67% and reducing latency from 420 ms to 1.2 ms (350x speedup); engineered automated cosine threshold sweeps (0.75–0.95), Hindi/English lexical negation guards, and automated PII scrubbers with TTL cache hygiene.

AI Resume Tailor & LaTeX Engine — Chrome Extension & Cloud Backend *React, TypeScript, Java Spring Boot, AWS Elastic Beanstalk, Groq, LaTeX*

- Built a Chrome extension (React, Tailwind) with a multi-LLM fallback routing backend on Java Spring Boot (AWS Elastic Beanstalk); parses PDF/DOCX documents and dynamically compiles tailored resumes into ATS-compliant LaTeX PDFs.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, Java (21/23), SQL
AI Systems & LLM Evals: Multi-LLM Routing (Groq, Gemini, OpenRouter), OWASP LLM01 Defense, LLM-as-a-Judge Calibration, Cohen's Kappa, Semantic Caching (MiniLM-L12-v2), Prompt Engineering & JSON Schema
Backend & Systems: Node.js, Express.js, FastAPI, Spring Boot, Django, Raw TCP Sockets, RabbitMQ Queues, REST APIs
Payments & Billing: Razorpay, Stripe, Zoho Payments, Webhook Pipelines, HMAC Verification, Idempotency Keys
Databases & Vector Stores: PostgreSQL, Supabase, MongoDB, Qdrant, ChromaDB, Redis (RESP Protocol), In-Memory Buffers
Frontend & Cloud/DevOps: React.js, Next.js 15, Electron, Android, Tailwind CSS, Docker, AWS Elastic Beanstalk, Firebase, Git, Pytest

Education

Chitkara University, Chandigarh — Master of Computer Applications (MCA) 2022 – 2024
The Bhopal School of Social Sciences (BSSS), Bhopal — Bachelor of Computer Applications (BCA) 2019 – 2022
