Summary

Full-stack engineer specialising in **payment infrastructure** (Stripe/Zoho parallel gateway, HMAC webhook pipelines) and **LLM systems** (multi-provider runtime routing). Currently running CHINTU AI — a live multi-LLM SaaS with 40 active paying subscribers. Previously sole engineer across 4 production applications and payments owner at a fintech platform. Seeking mid-to-senior roles where end-to-end backend ownership is expected, not exceptional.

Experience

Founder & Full Stack Developer *Feb 2026 – Present*
CHINTU AI (getchintu.com) Remote, India
Solo-built live multi-LLM SaaS — 40 active Stripe subscribers, 500+ registered users

- Designed a runtime multi-LLM routing layer (Groq, OpenRouter, DashScope) selecting optimal provider per request type; handles ∼800 LLM requests/day with automatic fallback and sub-200 ms streamed responses.
- Shipped cross-platform desktop apps (Windows/macOS via Electron, Android APK) with 63-language real-time transcription via AssemblyAI; credit-based Stripe billing across 3 tiers with webhook-driven entitlement sync and no polling.

Full Stack Developer *Nov 2025 – Jan 2026*
Indian Capital and Investment (Coimbatore) Limited — fintech investment platform Remote, India
Team of 20 engineers — sole owner of Stripe/Zoho Payments integration end-to-end

- Replaced scheduled polling with a webhook-driven event pipeline, cutting payment failure detection lag from 20 min to under 3 min; implemented idempotency key handling and HMAC signature verification across all endpoints, preventing duplicate transactions and replay attacks.
- Migrated CI/CD to Firebase App Hosting, cutting deployment time from 30 min to under 5 min.

Software Developer *Aug 2024 – Oct 2025*
Vasnaani Sanskaran — early-stage software startup Lucknow, India
Sole engineer — designed and shipped 4 customer-facing web applications from schema to deployment

- Eliminated N+1 query patterns and added composite indexes on 3 high-traffic endpoints; p95 response time dropped from ∼850 ms to ∼550 ms, confirmed in production server-timing logs.
- Introduced memoized selectors with `reselect` across 12 Redux-connected components, eliminating full-tree re-renders; measured 25% improvement via React DevTools Profiler.

Full Stack Developer Intern *Jan 2024 – Jun 2024*
Hoping Minds Mohali, India

- Rebuilt performance-critical pages as React components consuming Django REST APIs, raising Lighthouse mobile score from 68 to 94 and cutting page load time by 22%.

Projects

TempusMail — Email Hosting SaaS *Next.js, Node.js, TypeScript, Firebase, Stripe, Zoho Payments*

- 150+ active mailboxes across 3 tiers; processes ∼5k webhook events/month through isolated billing, webhook, and delivery microservices — each with its own failure boundary and retry logic.
- Stripe and Zoho Payments as parallel billing gateways sharing HMAC verification logic, fully decoupled from the delivery service.

YouTube Automation — AI Pipeline *Next.js, TypeScript, PostgreSQL, Prisma, AssemblyAI, Gemini, FFmpeg*

- Automated processing of 300+ videos (AssemblyAI transcription → Gemini Vision tagging → filename fallback) — cut per-video workflow from ∼45 min to under 4 min; per-stage retry logic isolates failures without restarting the pipeline.

Social Connect — Real-Time Platform *Angular, TypeScript, Node.js, MongoDB, Socket.io, WebRTC, Passport.js*

- Hybrid Socket.io + WebRTC P2P messaging; sustained 200 concurrent sessions under k6 load testing with p99 signalling latency under 90 ms on a single Node.js instance.
- JWT + Google/Facebook OAuth via Passport.js with RBAC room access; ephemeral signalling separated from persistent MongoDB storage.

Technical Skills

Payments & Billing: Stripe, Zoho Payments, Razorpay, Webhook Architecture, HMAC Verification, Idempotent Event Processing, Parallel Gateway Integration
AI & LLM: Groq, OpenRouter, DashScope, Gemini, Multi-LLM Routing, AssemblyAI, Prompt Engineering
Languages: TypeScript, JavaScript (ES6+), Python, SQL
Frontend: React.js, Next.js, Angular, Redux, Tailwind CSS, Framer Motion
Backend: Node.js, Express.js, Django, Django REST Framework, REST APIs, Microservices
Databases: PostgreSQL, MySQL, MongoDB, Firebase, Firestore, Supabase
DevOps & Tools: Git, GitHub Actions, Docker, Firebase Hosting, Vercel, Render
Auth & Security: JWT, OAuth 2.0, RBAC, Clerk, Passport.js

Education

Chitkara University – Master of Computer Applications (MCA) 2022 – 2024
Punjab, India
The Bhopal School of Social Sciences (BSSS) – Bachelor of Computer Applications (BCA) 2019 – 2022
Bhopal, India
